Lecture: March 26, 2009

Polar Bears in a Changing Climate

Climate change is drastically affecting the sea ice inhabited by the world's most iconic Arctic mammal – the polar bear. In this special presentation, Dr. Andrew Derocher, Professor of Biological Sciences from the University of Alberta, will present his research on the effects climate change is having on polar bears, their habitat and their prey.

Location: Royal Alberta Museum Theatre
12845 - 102 Avenue
Edmonton, Alberta

Time: 7 pm
Admission: FREE
